STAF-SG – ANSI flanges

Balancing valves
Size 3/4" - 16"

Breakthrough
engineering for
a better world

STAF-SG – ANSI flanges

A flanged, ductile iron balancing valve that delivers accurate hydronic performance in an impressive range of applications. The STAF-SG is ideal for use mainly on the secondary side in heating and cooling systems.

Key features

Handwheel

Equipped with a digital read-out, the handwheel ensures accurate and straightforward balancing.
Handwheel for sizes 2 1/2" - 6" with side reading makes the read-out easy from any angle.

Accurate and precise

Provides high accuracy of measurement.

Self-sealing measuring points

For simple, accurate balancing.

Positive shut-off function

For easy maintenance.

Technical description

Application:

Heating (not steam) and cooling systems

Functions:

Balancing
Presetting
Measuring
Shut-off (The balancing cone for valve sizes 4" - 16" is pressure released).

Dimensions:

3/4" - 16"

Pressure class:

Class 150

Temperature / Max. pressure:

14 to 100 °F / 250 psi

200 °F / 235 psi

248 °F / 225 psi

Temperature:

Max. working temperature: 248°F

Min. working temperature: 14°F

Media:

Water or neutral fluids, water-glycol mixtures (0-57%).

Material:

Body: Ductile iron, EN-GJS-400-15 (~ ASTM A536 Grade 60-40-18. ISO 1083 Grade 400-15).

Size 3/4" - 6":

Bonnet, cone and spindle of AMETAL®.

Size 8" - 12":

Bonnet and cone of ductile iron EN-GJS-400-15, and spindle of AMETAL®.

Size 14" - 16":

Bonnet of ductile iron EN-GJS-400-15, cone of silicon brass CuZn16Si4-C (EN 1982) and gunmetal CuSn5Zn5Pb5 (EN 1982), and spindle of AMETAL®.

Cone sizes 4" - 16": PTFE coated.

Seals: EPDM.

Slip washer: PTFE.

Bonnet bolts: Surface treated steel.

Measuring points: AMETAL® and EPDM.

Handwheel: Size 3/4"-2" polyamide and TPE, size 2 1/2"-6" polyamide, size 8"-16" aluminium.

AMETAL® is the dezincification resistant alloy of IMI.

Surface treatment:

Size 3/4" - 8": Epoxy painting.

Size 10" - 16": Duasolid painting.

Marking:

Size 3/4" - 2": TA, PN, DN (mm), 400-15 (material) and flow direction arrow.

Size 2 1/2" - 16": TA, Class 150, size (inch), 60-40-18 (material), casting date and flow direction arrow.

CE-marking:

CE: STAF-SG (Class 150) size 2 1/2" - 6".

CE 0409*: STAF-SG (Class 150) size 8" - 12".

*) Notified body.

Flanges:

Size 3/4" - 2": ISO 7005-2 and EN 1092-2.

Bolt circle according to Class 150 ASME/ANSI B16.42.

Size 2 1/2" - 16": Class 150 ASME/ANSI B16.42 (~ PN 20 according to ISO 7005-2).

Face to face length:

ISO 5752 series 1, EN 558-1 series 1.

Measuring points

Measuring points are self-sealed. Remove the cap and insert the probe through the seal.

Sizing

When Δp and the design flow are known, use the formula to calculate the Cv value or use the diagram.

$$Cv = 1.52 \frac{q}{\sqrt{\Delta p}} \quad q \text{ in GPM, } \Delta p \text{ in ft WG}$$

$$Cv = \frac{q}{\sqrt{\Delta p}} \quad q \text{ in GPM, } \Delta p \text{ in psi}$$

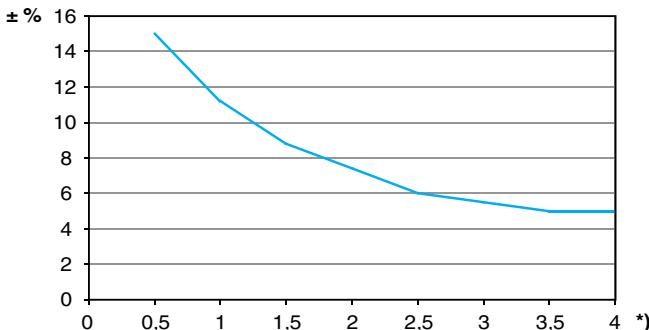

Measuring accuracy

The handwheel zero position is calibrated and must not be changed.

Deviation of flow at different settings

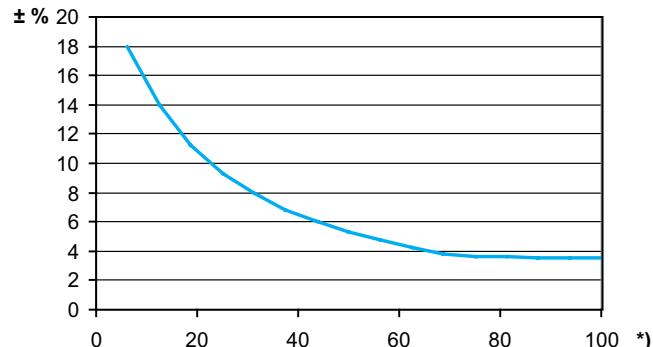

The curve holds for valves with the correct flow direction, straight pipe distances (Fig. 1) and normal pipe fittings.

Size 3/4" - 2"

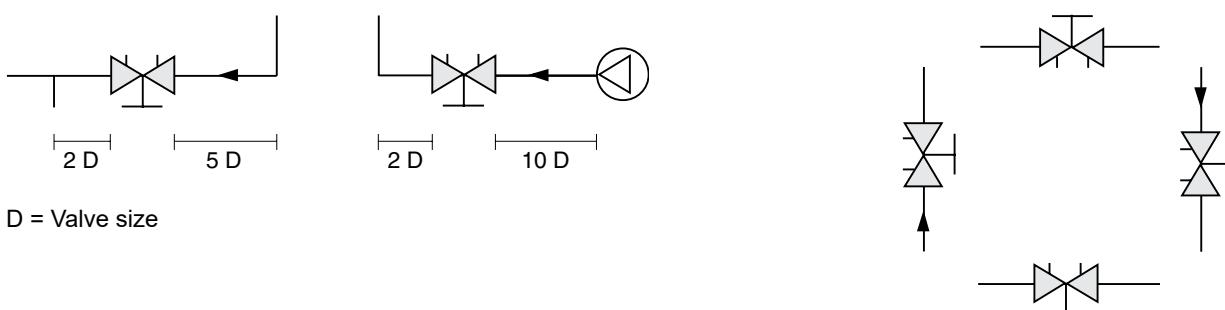

*) Setting, No. of turns.

Size 2 1/2" - 16"

*) Setting (%) of fully open valve.

Fig. 1

Correction factors

The flow calculations are valid for water (68°F). For other liquids with approximately the same viscosity as water (≤ 20 cSt = $3^{\circ}\text{E} = 100\text{S.U.}$), it is only necessary to compensate for the specific density. However, at low temperatures, the viscosity increases and laminar flow may occur in the valves. This causes a flow deviation that increases with small valves, low settings and low differential pressures. Correction for this deviation can be made with the software HySelect or directly in our balancing instruments.

Cv values

Setting

It is possible to read the set value on the handwheel.

The number of turns between the fully open and closed positions is:

- 4 turns for 3/4" - 2",
- 8 turns for 2 1/2" - 6",
- 12 turns for 8" - 10",
- 16 turns for 12",
- 20 turns for 14" and
- 22 turns for 16".

Initial setting of a valve for a particular pressure drop, e.g. corresponding to 2.3 turns on the graph, is carried out as follows:

1. Close the valve fully (Fig 1)
2. Open the valve to 2.3 turns (Fig. 2).
3. Using an Allen key, turn the inner spindle clockwise until the stop position.
4. The valve is now set.

To check the setting of a valve, first close the valve, then open it to the stop position; the indicator then shows the presetting number, in this case 2.3 (Fig. 2).

Example size 2 1/2"

Fig. 1 Valve closed

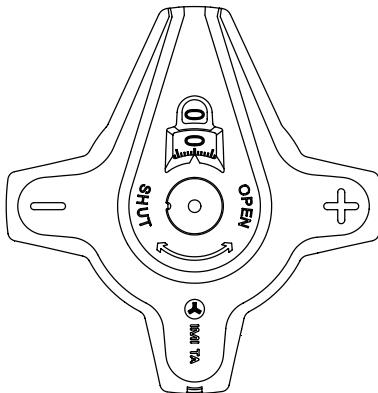

Fig. 2a The valve is set at 2.3

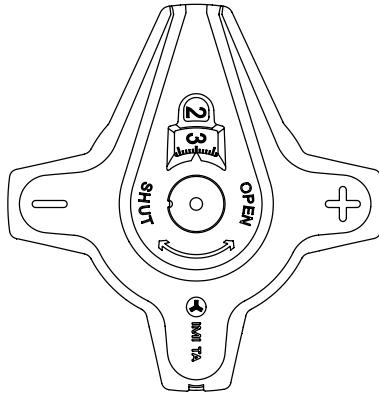

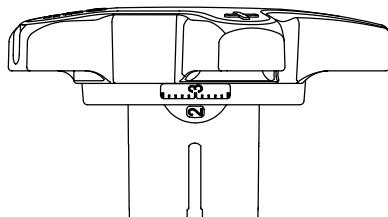

Fig. 2b Setting 2.3 side view

Example size 8"

Fig. 1 Valve closed

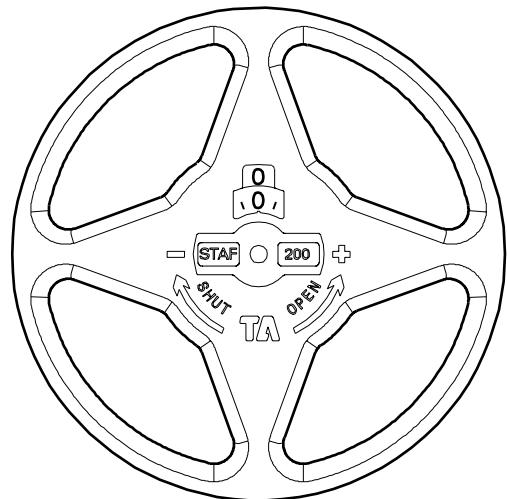

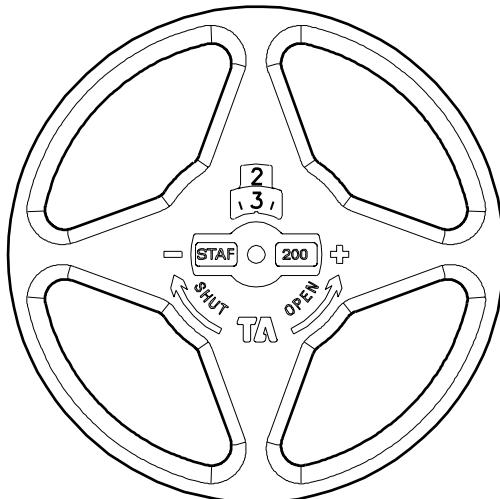

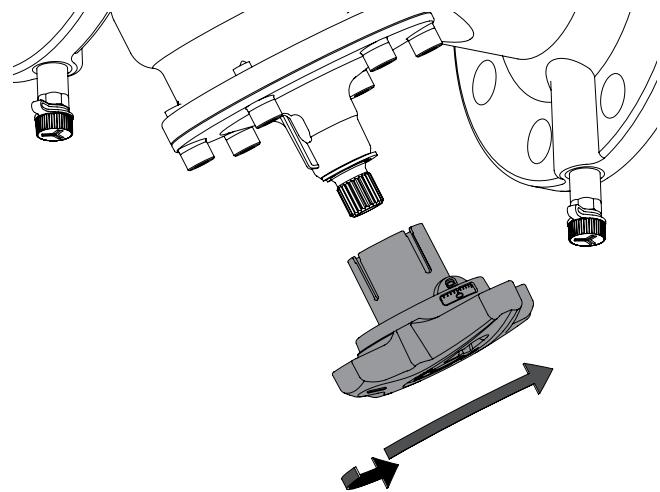

Fig. 2 The valve is set at 2.3

Change of handwheel position sizes 2 1/2" - 6"

The handwheel on valve sizes 2 1/2" - 6" have a reading on the side as well as on the top of the handwheel to make it easier to read.

The handwheel can be rotated to have the side view reading in three different positions.

Spindle extension sizes 2 1/2" - 6"

The spindle can be extended on valve sizes 2 1/2" - 6" to make more room for insulation if needed. An extension kit is included with the valves sizes 2 1/2" - 6".

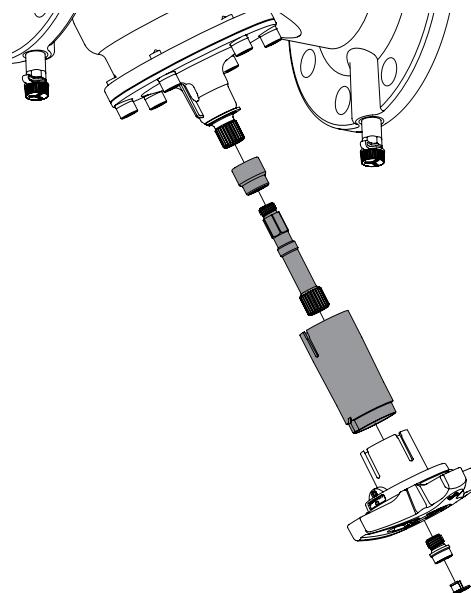

Diagram example

Wanted:

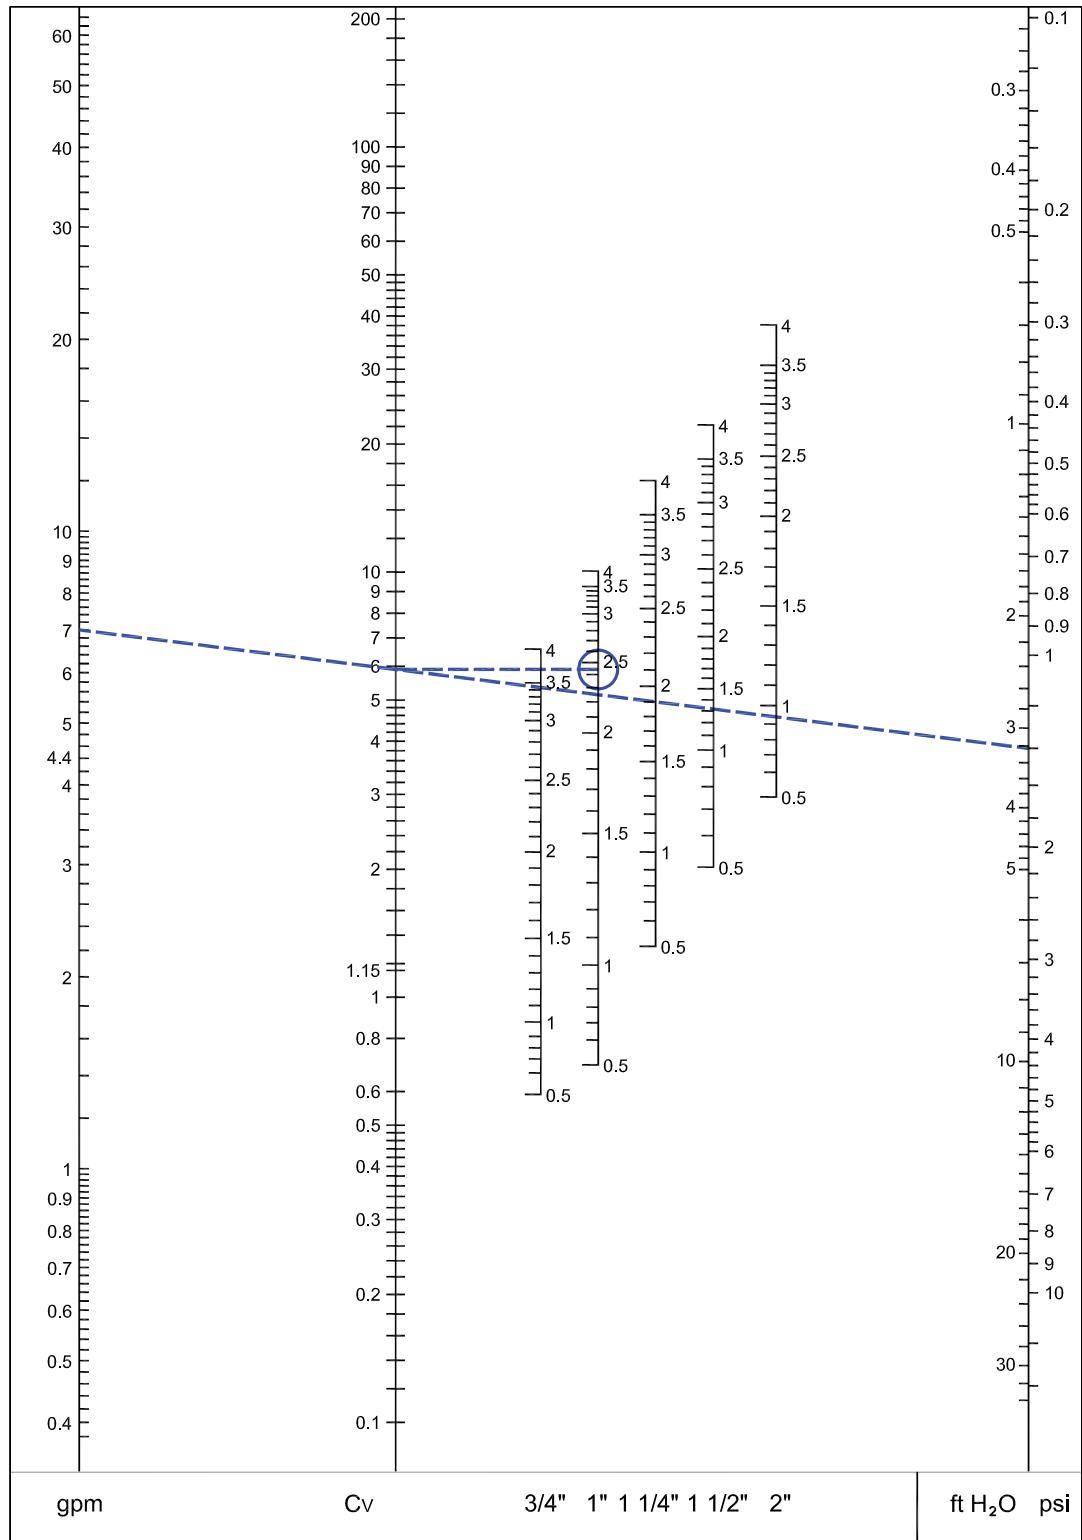

Presetting for size 1" at a desired flow rate of 7 gpm and a pressure drop of 1.4 psi.

Solution:

Draw a straight line joining 7 gpm and 1.4 psi. This gives $Cv = 6$. Now draw a horizontal line from $Cv = 6$. This intersects the bar for size 1" at the desired presetting of 2.45 turns.

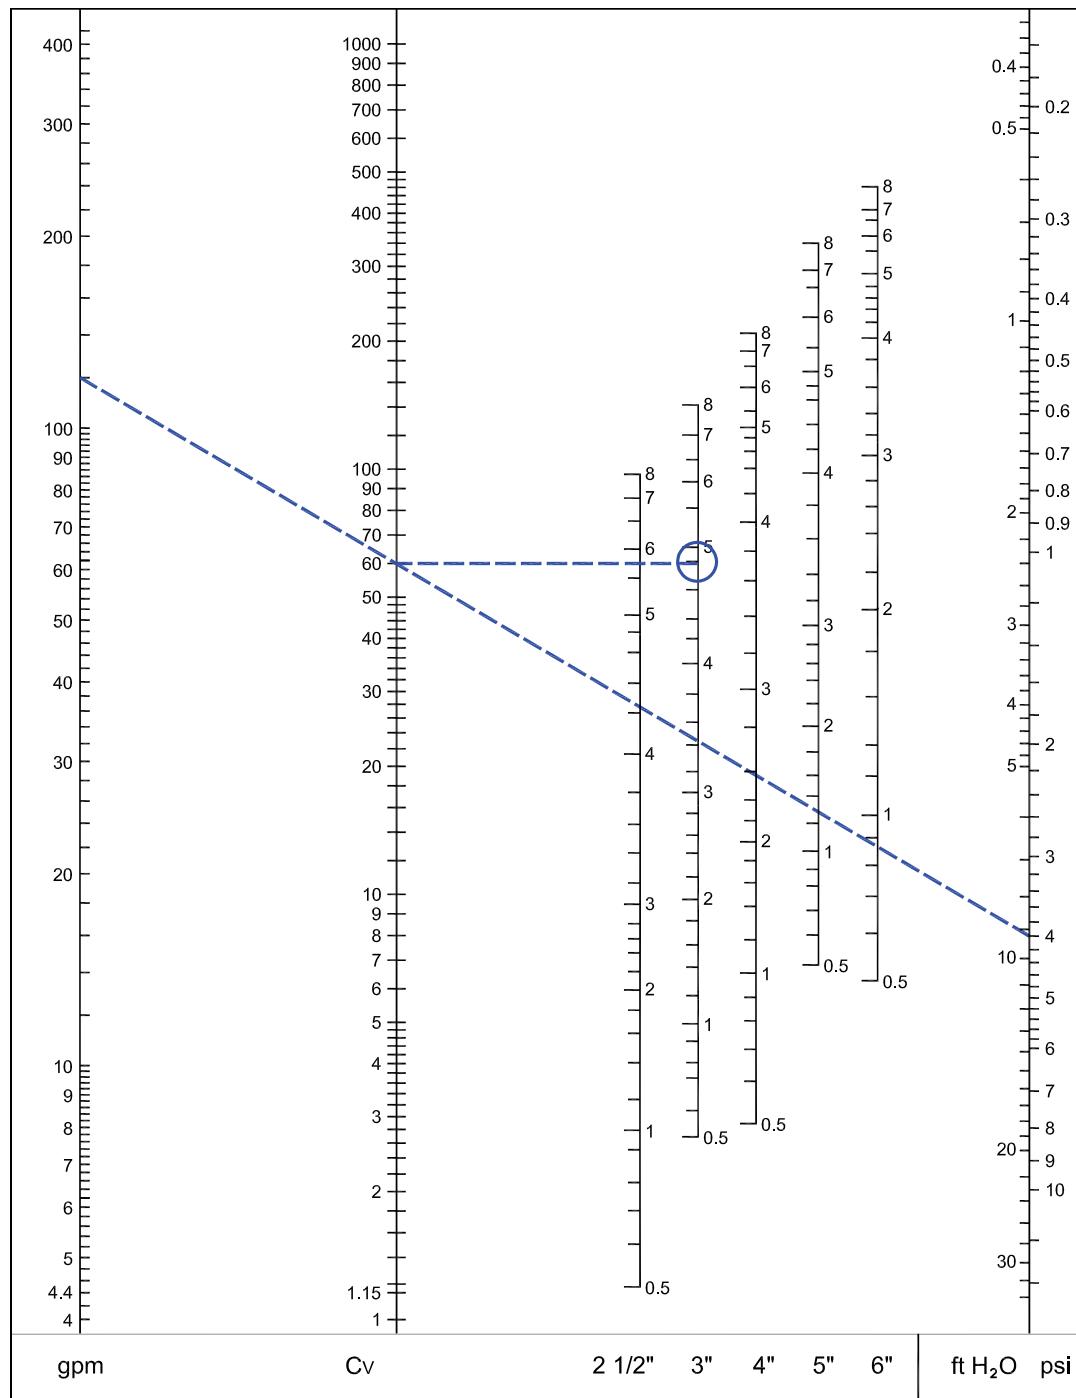

NOTE:

If the flow rate falls outside the scale in the diagram, the reading can be made as follows: Starting with the example above, we get 1.4 psi, $Cv = 6$ and flowrate 7 gpm. At 1.4 psi and $Cv = 0.6$ we get the flow-rate 0.7 gpm, and at $Cv = 60$, we get 70 gpm. That is, for a given pressure drop, it is possible to read 0.1 times or 10 times the flow and Cv -values.

Diagram size 3/4" - 2"

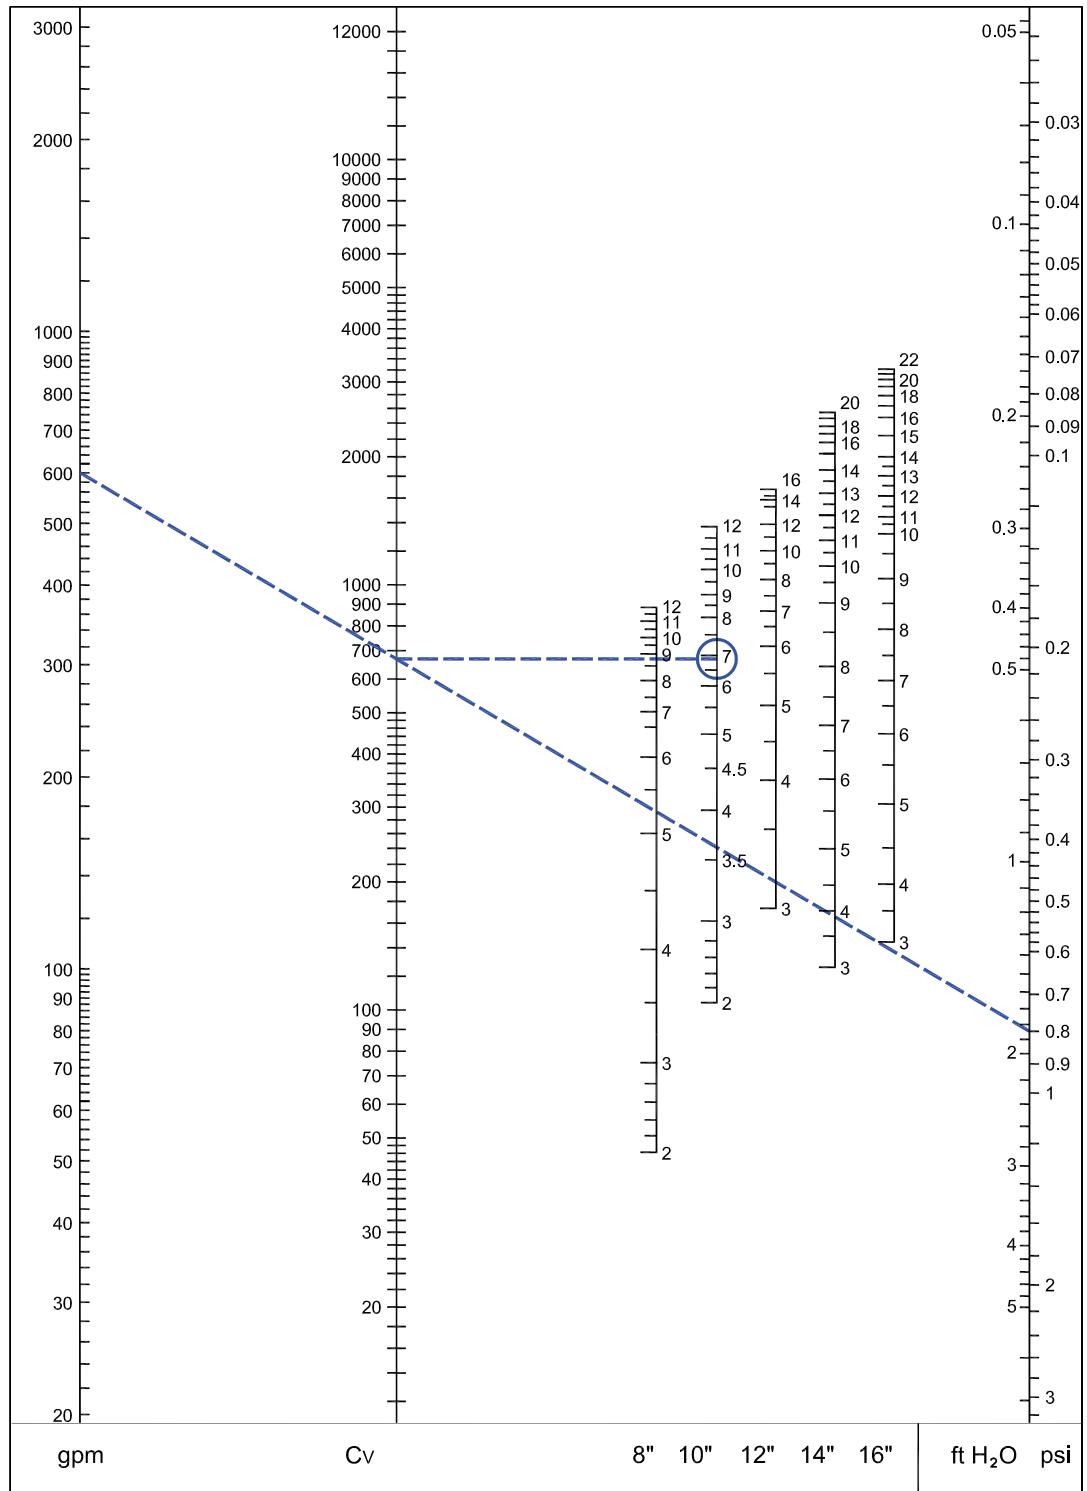

Recommended area: See Fig. 3 under "Measuring accuracy".

Diagram size 2 1/2" - 6"

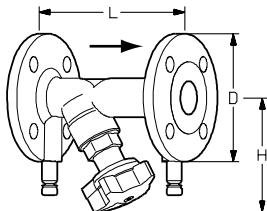

Recommended area: See Fig. 3 under "Measuring accuracy".

NOTE: In softwares (HySelect, HyTools) and balancing instrument (TA-SCOPE) the STAF-SG, sizes 2 1/2" - 6", is named STAF-SG*.

Diagram size 8" - 16"

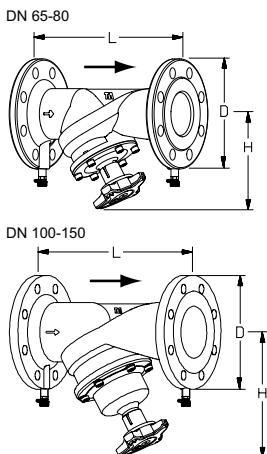

Recommended area: See Fig. 3 under "Measuring accuracy".
